The SolarPath LineLight system

The perfect solution for areas outside the reach of sunlight. The unit collects energy using a solar panel placed in a strategically illuminated location, and transfers energy to the units installed in the ground.

Hybrid Power Options

The LineLight system can be configured for hybrid operation with a conventional public energy network in conjunction with the solar energy source.

Lighting Configurations

Where there is a need for full control over the marker system operation, the LineLight offers options including pushbutton, motion sensor, timer, diverse signaling, and more.

R1/R2 – Total Control

R1 – Pushbutton Crosswalk Demarcation

System Setup

The LineLight markers are installed in the ground and are wired via a controller to the energy source. The source can be either a solar panel supplying a charge to a battery, direct connection to the power grid, or a utilization of both as backup for critical safety and security applications.

LineLight - Configuration

Public Tram – Trolley Car Activation

Public Tram – Pedestrian Notification

Applications

- Lane Delineation
- Crosswalks
- Pathway Lighting
- Security Lighting
- In-ground signaling system
- “Wrong-way” directional guidance
- Emergency Guidance
- Tunnels
- Shaded Areas
- Traffic guidance and control
- Pedestrian guidance and control
- Decorative Accent Lighting

LineLight C2

LineLight C2 – Lane Demarcation

LineLight C2 - Crosswalk

LineLight R1/R2

LineLight R2 – Simple Service

LineLight R1 – Dual Color Control

Extreme Luminosity

Hybrid power connection and large energy storage battery allow the use of high intensity luminosity markers such as LineLight R1 and LineLight R2

Adjustable Sequence & Intensity

Adjust intensity levels, and create steady or various types of flashing patterns including sequential lighting. Coordinated flashing in a streamlined 'one-by-one' is available.

Remote Control

Either by computer/wireless (GSM) or preprogramming of the lighting times and flash patterns, you can create the option to manipulate the system externally.

Simple Maintenance

Simple maintenance via inner/outer case slip. Unit can be maintained in the field should any unforeseen issue arise.

LineLight R1

Uni-Directional Ultra-Bright

- Extremely durable and long lasting
- Stainless steel body
- PC/Remote Control
- Auto Cleaning System
- High mechanic resistance design
- Highest quality internal components
- Absolute water resistance(IP68)
- Snow-plow resistant
- Easy maintenance

The LineLight R1 is equipped with 12 high intensity Ultra-bright 3mm LEDs

LineLight R1 – High Impact Highway

The HighLight Series

LineLight R2

**Bi – Directional
Ultra-Bright**

- Extremely durable and long lasting
- Stainless steel body
- PC/Remote Control
- Auto Cleaning System
- High mechanic resistance design
- Highest quality internal components
- Absolute water resistance(IP68)
- Snow-plow resistant
- Easy maintenance

The LineLight R2 is equipped with 24 high intensity Ultra-bright 3mm LEDs

LineLight R1 – Daytime Visibility

LineLight R2

LineLight C8

Bi – Directional
Simple & Powerful

- Durable and long lasting
- Stainless steel body
- High mechanic resistance design
- Highest quality internal components
- Absolute water resistance(IP68)

The LineLight C8 is equipped with 16 high quality Ultra-bright 3mm LEDs

LineLight C8 – Pedestrian Warning

LineLight – C8

LineLight C2

Bi - Directional
Uni - Directional

- Durable and long lasting
- Solar Powered or Grid Connected
- Internal Prismatic Reflection (RPI)
- Sleek Stainless Steel Design
- High mechanic resistance design
- Highest quality internal components
- Absolute water resistance(IP68)
- Easy maintenance

The LineLight C2 implements sleek high-design and performance.

LineLight C2 – Decorative Path Marking

The HighLight Series

LineLight C8 – Exit Marking

LineLight C2 – Bridge Guidance

LineLight C2 – Active Demarcation

LineLight R1 – Lane Split

LineLight C2 – Truck Guidance

LineLight C2 – Bike Lane Demarcation
